

Install Artificial Turf....Why?

A holiday park client in NSW has recently transformed many of their powered sites and installed 2000m² of Artificial Turf. Not only are they enjoying the benefits of artificial turf as listed below, guest satisfaction by those customers staying on the new turf sites has increased significantly.

1. It Is Maintenance free, saves you time and money!

Artificial Turf does not need mowing, trimming, watering, or fertilizing. Once it is installed, it can be left to its own devices. All you need to do to maintain it in its prime and pristine condition is remove any debris and leaves and then sit back to enjoy its beauty.

2. It is Environmentally-friendly

Cuts water usage dramatically, reduces your carbon footprint, and the synthetic material can be recycled.

3. It is Drought resistant

Artificial Turf is drought resistant. It retains its colour and pile in the toughest of Australian conditions; and, as a result, always looks lush no matter what the weather conditions are.

4. It Has Colour Fastness

Artificial Turf is colour fast. The colour will not rub off on you or your clothing when you walk over the lawn.

5. It Is UV resistant

Artificial Turf is also UV resistant. Each individual grass fibre is coated with a substance that prevents the UV or sun rays from penetrating the fibres. This helps retain the lawn in its original condition where natural lawn will burn in the hot sun.

6. It Is Suitable for a variety of surfaces

Artificial Turf is great for those shady places where real lawn never takes properly or those difficult arid spots where nothing will grow. It is durable for those high-traffic areas such as a powered site in a caravan park where natural grass always takes a battering. In fact, there's nowhere that their Artificial Turf doesn't do well. It's perfect for roof top bars & gardens and swimming pool areas, patios and balconies.

7. Child and pet friendly.

It's important to install an artificial lawn that is not dangerous or toxic to both children and pets. Both children and pets can develop an allergy to natural lawns. Synthetic lawns are made from allergy-free materials.
